

Task 1 : Product Thinking

Name: Nikhil Raj

Registration no: 24BCE11306

I would pick VTOP Bhopal website. It is not my favourite website but I would like to add some features to it as a developer.

Problem:

As a student of vitbhopal i have seen students have to leave VTOP and visit another website to report hostel issues like electrical faults, plumbing, Wi-Fi problems, room maintenance, housekeeping, or furniture damage. This fragmented experience causes confusion, slower reporting, and poor tracking of complaint status.

Solution:

Integrate Hostel Management directly into the hostel section of VTOP. Which have currently Leave related features and hostel allotment information.

Features that i will integrate:

1) A category for raging complaints:

- Electrical
- Plumbing
- Wi-Fi
- Furniture
- Housekeeping
- Water
- Lift
- AC/Cooler
- Other

2)Upload Images

3)Auto-filled Information

Here the details of student block and room number is already in VTOP so their is no need to choose block and room all that it reduces that hustle also.

4)Complaint Tracking

A full track record will be there like submitted ,Assigned ,Technician Visit ,Work in Progress and Completed.

5)Complaint History

Why this solution?

- 1.Multiple websites
- 2.Multiple logins
- 3.Confusing navigation
- 4.Students don't know where to complain
- 5.Hard to track complaint progress
- 6.No notifications

This will help organise reports and solution systems within a space.

VTOP Dashboard change:

Now aside from Students, Faculty, Alumni, and Parents. There is an option for Warden also who can see this reports and manage them.
